*Lateralization and cognitive systems* Sebastian Ocklenburg,Christian Beste,Onur Gunturkun, Marco Hirnstein,2015-02-24 Left right asymmetries of structure and function are a common organization principle in the brains of humans and non human vertebrates alike While there are inherently asymmetric systems such as the human language system or the song system of songbirds the impact of structural or functional asymmetries on perception cognition and behavior is not necessarily limited to these systems For example performance in experimental paradigms that assess executive functions such as inhibition planning or action monitoring is influenced by information processing in the bottom up channel Depending on the type of stimuli used one hemisphere can be more efficient in processing than the other and these functional cerebral asymmetries have been shown to modulate the efficacy of executive functions via the bottom up channel We only begin to understand the complex neuronal mechanisms underlying this interaction between hemispheric asymmetries and cognitive systems Therefore it is the aim of this Research Topics to further elucidate how structural or functional hemispheric asymmetries modulate perception cognition and behavior in the broadest sense

necessary to fully understand and respond to potential or existing risks that originate at the animal human ecosystems interfaces Thus the One Health concept represents a holistic vision for addressing some of the complex challenges that threaten human and animal health food safety and the environments in which diseases flourish There are many examples showing how the health of humans is related to the health of animals and the environment Diseases shared between humans and animals are zoonoses Some zoonoses have been known for many years whereas others have emerged suddenly and unexpectedly Over 70% of all new emerging diseases over the past few decades have been zoonoses that have emerged from wildlife most often from bats rodents or birds Examples of zoonoses are many and varied ranging from rabies to bovine tuberculosis and from Japanese encephalitis to SARS Clearly a One Health approach is essential for understanding their ecology and for outbreak response and the development of control strategies However the One Health concept and approach is much broader than zoonoses it extends to including antimicrobial resistance food safety and environmental health and consequently impacts on global health security economic wellbeing and international trade It is this breadth of One Health that connects the papers in this Special Issue
