Prof. Dr. Peter E. Pfeffer,2016-08-15 In chassis development the three aspects of safety vehicle dynamics and ride comfort are at the top of the list of challenges to be faced Addressing this triad of

challenges becomes even more complex when the chassis is required to interact with assistance systems and other systems for fully automated driving. What is more, new demands are created by the introduction of modern electric and electronic architectures. All these requirements must be met by the chassis together with its subsystems: the steering, brakes, tires, and wheels. At the same time, all physical relationships and interactions have to be taken into account.
